

We pride ourselves on remaining at the cutting edge of technology in diagnostic testing. We recommend a preventive healthcare approach. The best treatment is always early intervention. The tests below are not covered by insurance and there will be a \$35 co-pay for both these services.

Retinal Imaging:

We now perform Clarus retinal imaging for all our patients. When reviewed, the images become a permanent part of your medical file, enabling the doctor to make important comparisons should potential vision threatening conditions present themselves at a future examination. There is a \$20 fee for this procedure. This may be covered by your insurance if being used to actively follow a disease. If a retinal image is performed, the doctor may not need to dilate your eyes.

I have read and understand the Clarus will be performed:

Sign: _____ Date: _____

Antioxidant Scan:

The BioPhotonic scanner is a groundbreaking device that measures the antioxidant levels in your skin. This is directly linked to the disease fighting antioxidant levels in your eye and other tissues of the body.

We can now easily measure and track your storage of these vital nutrients. The doctors use the BioPhotonic scanner to monitor their personal health, and recommend the scanner for every patient. The scan is non-invasive and only takes 30 seconds. There is a \$20 fee for this test and is not covered by insurance.

I have read and elect to have the antioxidant scan today:

Sign: _____ Date: _____

____ Please check if you have questions or would like more information from the doctor about the preventive healthcare testing before they are performed.
